The 10 warmest years since 1880: Global temperature anomalies

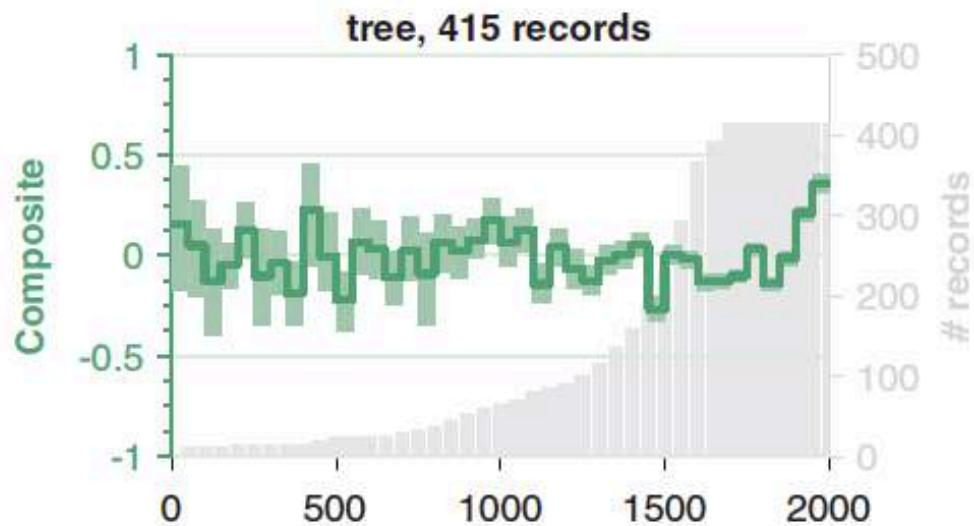

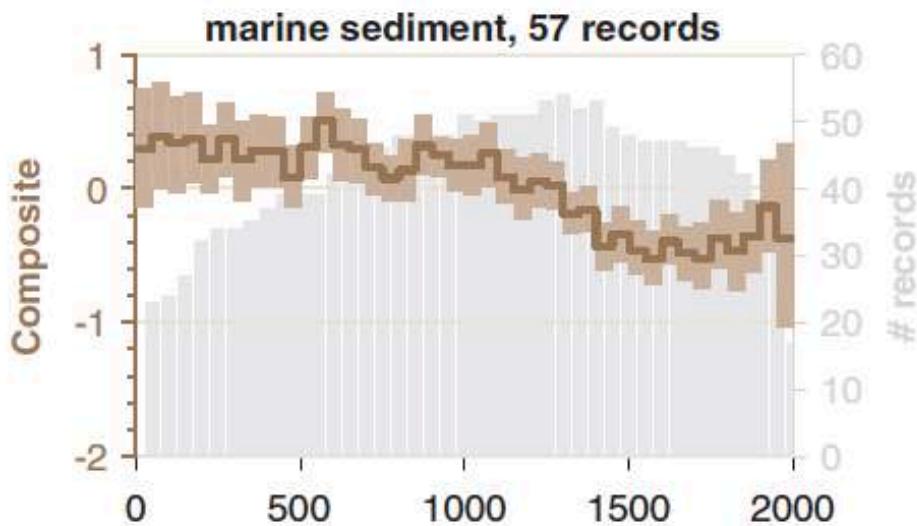

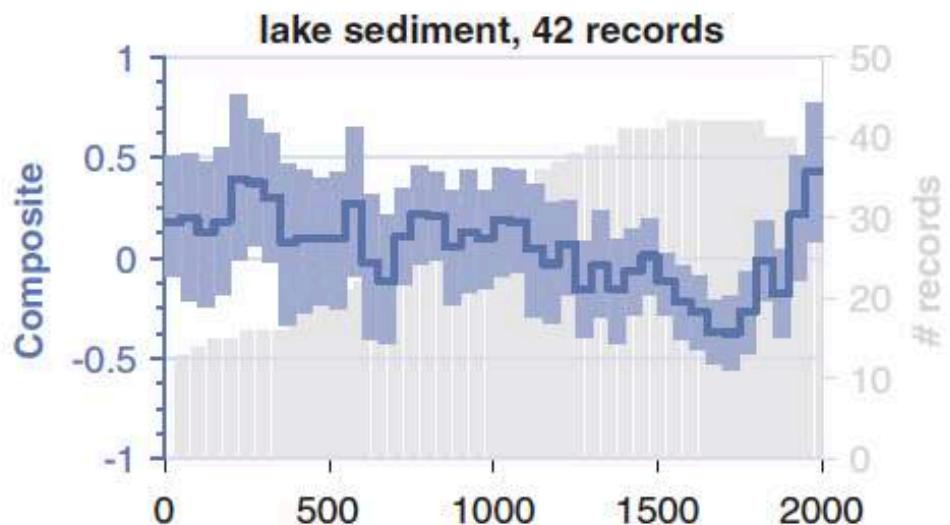

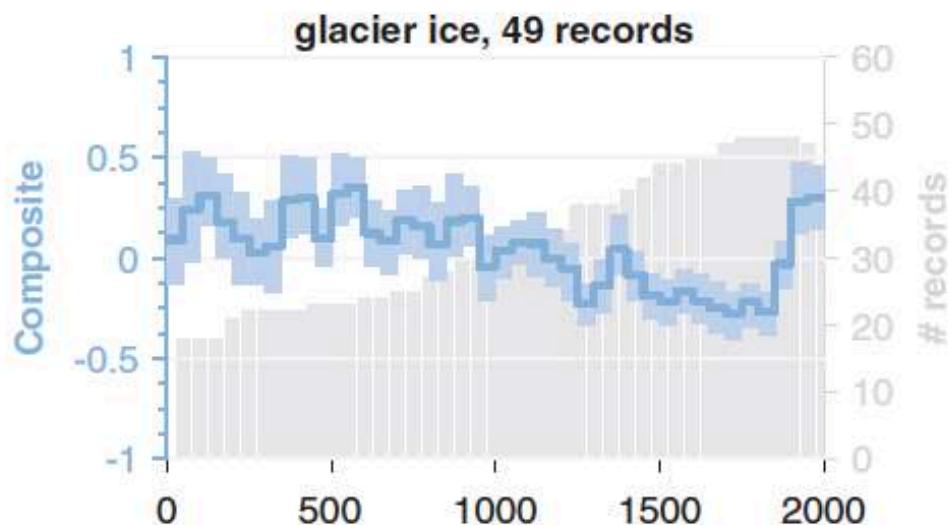

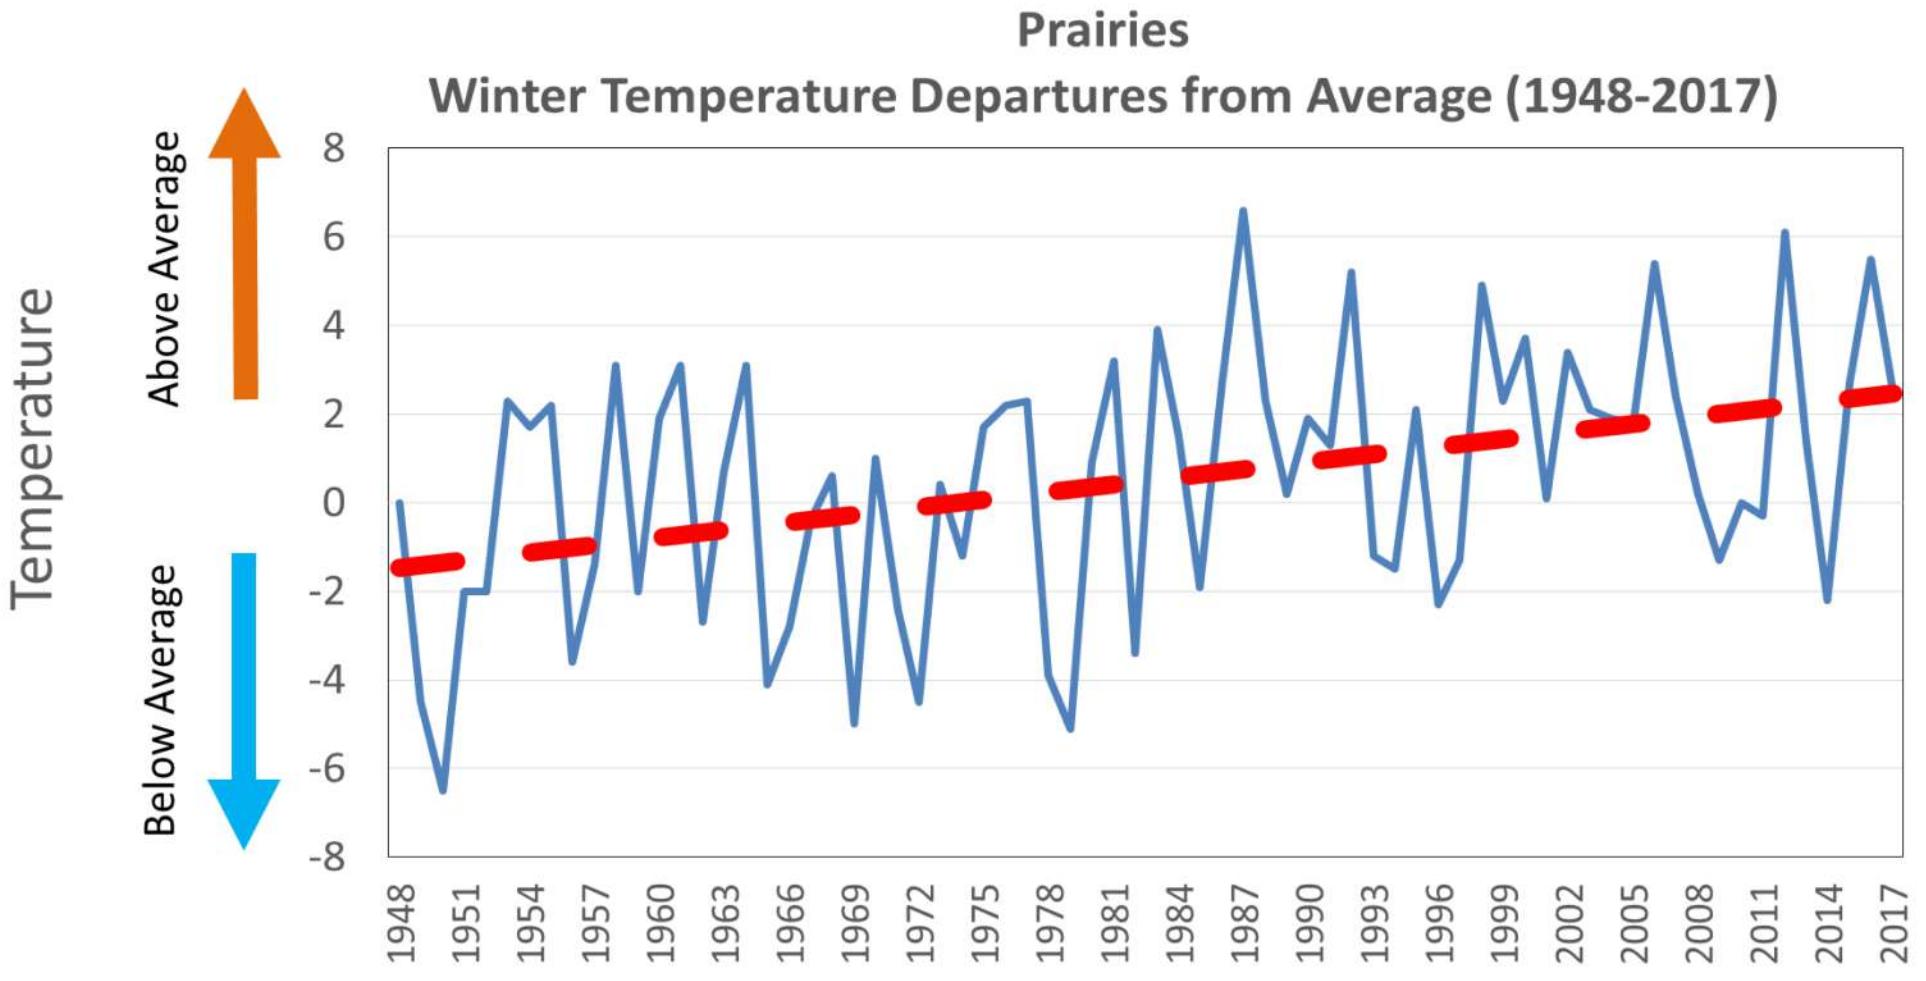

October 2018 marks was the **406th consecutive month** with temperatures above the 20th century average.

We are losing the advantage of a cold winter

The view of Canada as a cold but warming country:

"**You're lucky** because you're a northern-latitude country,
Mendelsohn says. "If you add it all up, **it's a good thing for Canada.**"

Robert Mendelsohn, Yale University

For countries like **Canada** and Russia, though, even more dramatic
[than 2°] **warming wouldn't be a problem**

Benny Peiser, John Moores University (Liverpool)

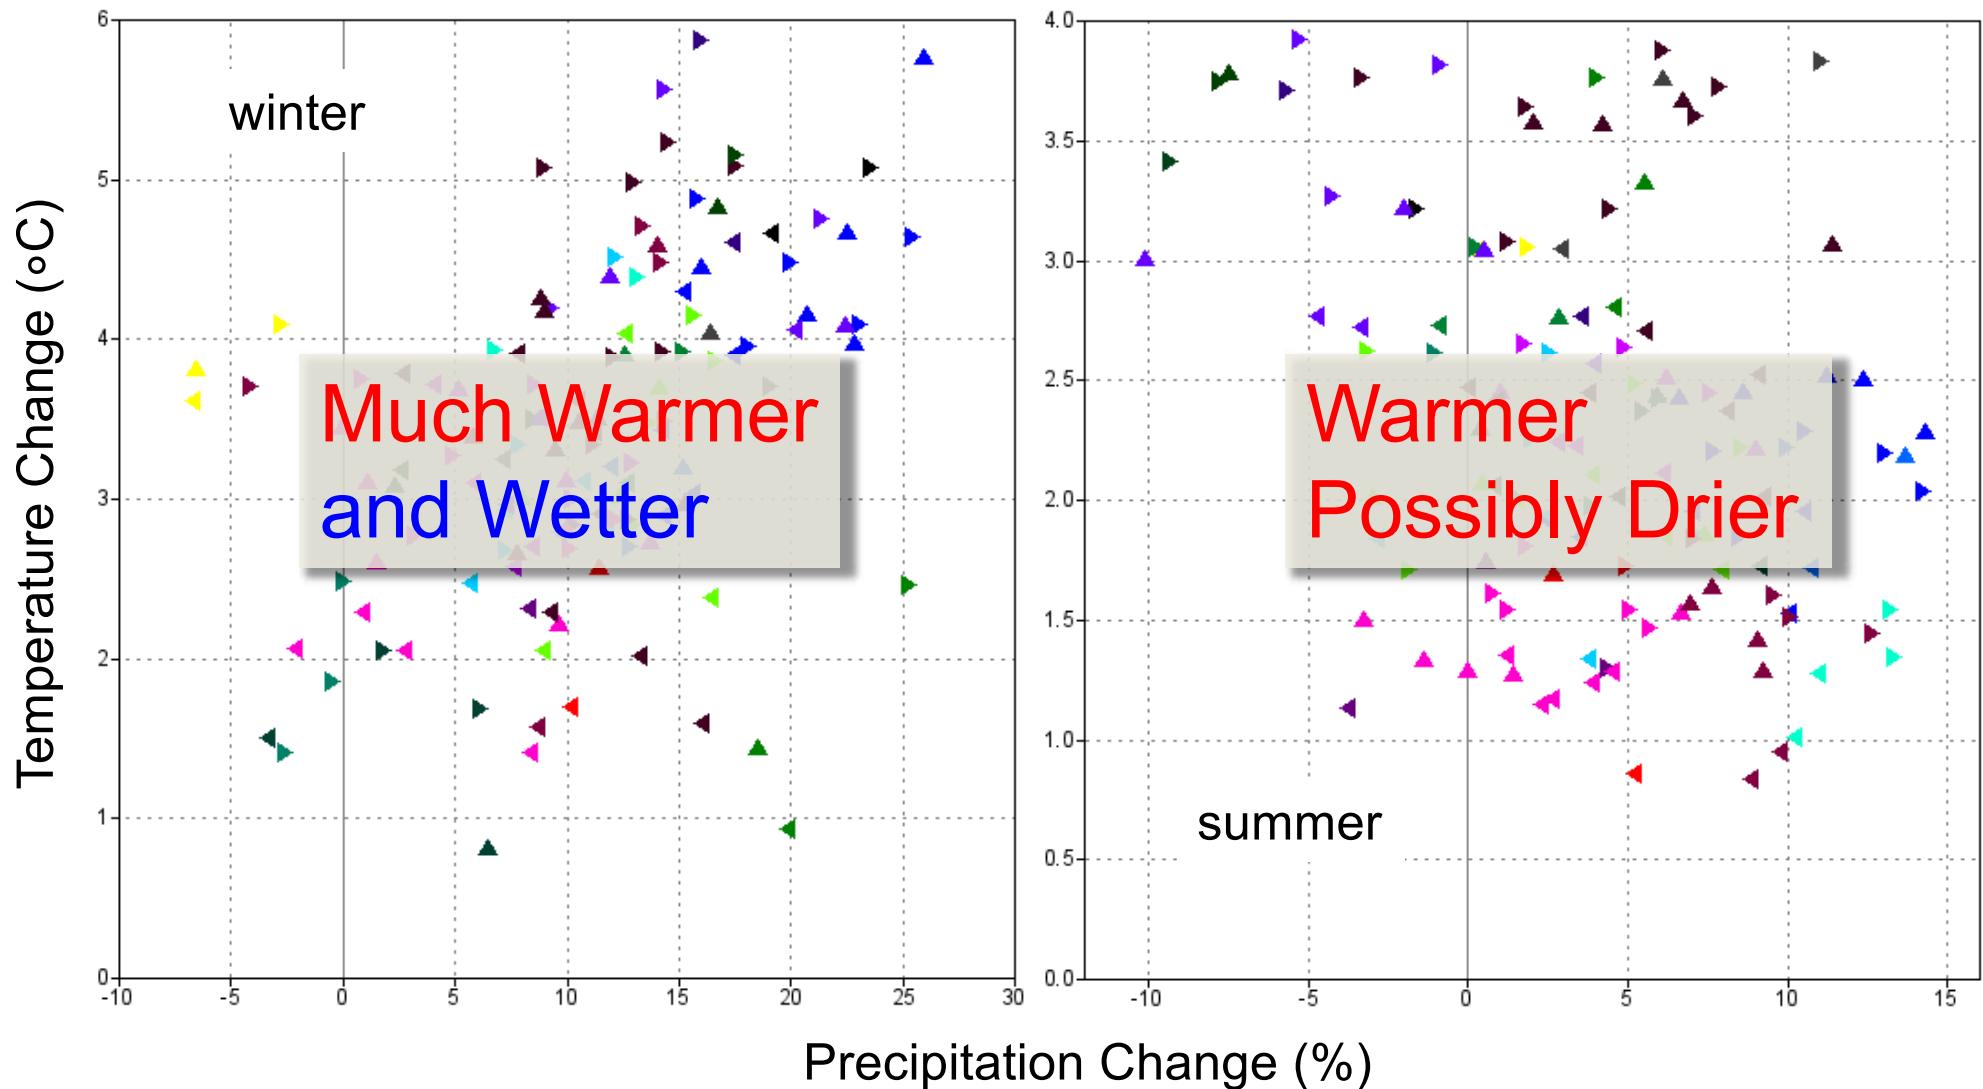

"We find a significant **increasing** trend in the **length of the growing season** and in the associated **available heat**. The **winter temperature is less damaging** and the frost-free periods are longer."

Qian et al. 2010

"in the case of **wheat**, **Canada** is projected by most models to replace the former Soviet Union [by 2050] to become **one of the top three exporters** in the world."

Climate change adaptation on the farm and ranch

A meaningful climate change adaptation policy in the agri-food sector must include the families who are impacted by extreme and unexpected weather.

Key Principles of Sustainable Agriculture and Planned Adaptation to Climate Change

Planned Adaptation	Sustainable Agriculture
Sustainable	Sustainable
Engage the local community	Developed by local communities
Evidence-based	Science-based
A balanced / holistic approach	Integrated: complement existing programs and policies
Prioritized	Targeted
Flexible and adaptive	Flexible and adaptive
Transparent	Accountable

Opportunities

- Longer growing season
- More heat units
- Increased precipitation in winter
- Less cold, more favourable winter

Challenges

- Increased variability
- More favourable climate for pests and invasive species
- Less water stored as snow
- Reoccurrence of sustained drought but in a warmer climate
